The encoded protein may be used as a reagent in kinase receptor activation assays, and therapeutically in diseases associated with over or under expression of neurotrophic factor (e.g. pain of inflammation, kidney, lung, cardiovascular or psychiatric disorders and some sorts of tumours). At the indicated splice site, AA 436-791 may replaced by the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human trkB and trkC poly:peptide(s) and fusion proteins contg. them - also DNA, vectors and transformed cells useful in treatment and diagnosis of abnormal neurotrophic factor expression, e.g. inflammatory pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-MAR-1994;

                   This invention describes a novel isolated and purified polypeptide (1), belonging to the trk family of receptor tyrosine kinases, trkB and trkC. (I) are useful in the purification of human neurotrophic factors and in the diagnosis of various human pathological conditions associated with elevated or reduced levels of neurotrophins capable of binding trkB and/or trkC. This sequence represents the human trkB receptor described in the method of the invention
                                                                                                                                  New human trk receptors useful in the diagnosis of various human pathological conditions associated with elevated or reduced level neurotrophins capable of binding trkB and/or trkC.

                                                                                                          Matches
                                                                         Query Match
                                                                                                                                    The present invention relates to a method of treating neurodegenerative or neurodevelopmental disorders in a mammal which involves administering an isolated nucleic acid encoding a full-length TrkB or TrkC or their mutant, variant, homologue or fragment or an anti-sense RNA for truncated TrkB or TrkC isoforms, where they increase the amount of full-length TrkB or TrkC or decrease the amount of truncated TrkB or TrkC in treated neurons. The methods and compositions of the invention are useful for treating or preventing neurodegenerative or neurodevelopmental disorders such as Alzheimer's disease (AD), Parkinson's disease (PD), Huntington's disease (HD), amyotrophic lateral sclerosis (ALS; Lou Gehrig's disease), diabetic peripheral neuropathy, the adverse complications of Down's syndrome (DS) and other types of peripheral neuropathy. Sequence is human TrkB protein
                                                                                                                                                                                                                                                                                                                                                                                                                         Treating and/or preventing neurodegenerative and neurodevelopmental disorders such as Alzheimer's, Parkinson's and Huntington's diseases by altering the ratio of amount of full-length and truncated TrkB or TrkC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB;

```

Screening for a neurotrophic factor mimetic, useful for treating, e.g., cancer and Alzheimer's, comprises combining a candidate mimetic with a fragment of a tyrosine kinase protein.

Fig 107pp; English.

The present sequence is that of human receptor tyrosine kinase TrkB, the receptor for brain-derived growth factor (BDNF) and neurotrophin-3 (NT-3). The invention concerns Trks and their ligands that modulate cell growth, differentiation and survival. Trk proteins are known to mediate the activities of neurotrophins and are also known proto-oncogenes. Wethods are claimed for screening for small molecule neurotrophic factor (NTF) mimetics, such as the cyclic peptide given in AAM50844, capable of binding to a Trk protein or of modulating the binding of a neurotrophin to a Trk protein. Also claimed are medicaments comprising a small molecule NTF mimetic and their use in claimed methods for treatment of cancer or a neurodegenerative disease selected from Huntington's disease

Claim 27; Page 417-418; 453pp; English.

The invention relates to a method for detecting a lung cancer-associated CC transcript in a cell from a patient, comprising contacting a biological CC sample from the patient with a polynucleotide that selectively hybridises CC increased or decreased expression in lung cancer samples. Lung cancer CC associated polynucleotides and polypeptides are used for identifying a CC compound that modulates a lung cancer-associated polypeptide, for CC cancer in a patient and for treating a mammal having lung cancer by CC cancer in a patient and for treating a mammal having lung cancer by CC cancer in a patient and for treating a mammal having lung cancer, non-small cell cfor treating lung cancer, such as small cell lung cancer, non-small cell concercing cancer or other benign or precancerous lesions, e.g. atelectasis, CC emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, chromitisers pulposes and as targets for screening for therapeutic CC compounds that modulate lung cancer, such as antibodies. Sequences CC ABU56408-ABU56745 represent lung cancer associated polypeptides of the invention

The invention relates to treating a neurodegenerative or neuro-
CC developmental disorder in a mammal. The method involves altering the
CC developmental disorder in a mammal. The method involves altering the
CC ratio of the amount of full length TrkB polypeptide to the amount of
CC amount of fill length TrkC polypeptide to the amount of truncated TrkC
CC polypeptides in a neuron. The methods and compositions of the present
CC divention are useful for treating and/or preventing a neurodegenerative
CC or neuro-developmental disorder, such as alzheimer's disease, Parkinson's
CC disease, Huntington's disease, surpotrophic lateral scherosis (Lou
CC dehrig's disease), the adverse neurologic complications of Down syndrome,
CC diabetic peripheral neuropathy and other types of peripheral neuropathy,
CC and is associated with an injury to the central or peripheral and/or
CC system resulting from stroke, cerebral ischaemia, or chemical and/or
CC physical trauma. The present sequence represents a human TrkB polypeptide
CC (GenBank Accession No. NM_006180)
                                                                                                                                                                                                                                                                                                                                                                                                     Treating and/or preventing neurodegenerative or neuro-developmental disorders, such as Alzheimer's disease, Parkinson's disease and amyotrophic lateral sclerosis, using nucleic acids encoding TrkB and/or TrkC polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (KRUE/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AIDS; acquired immunodeficiency syndrome; human immu HIV-related disorder; differential expression; drug viral replication modulation; diagnosis; prognosis; anti-HIV; gene therapy; antisense therapy; human;
The invention relates to a method of identifying a compound useful in the treatment of AIDS (acquired immunodeficiency syndrome) or an HIV (human immunodeficiency virus)-related disorder. The invention involves assaying the ability of a test compound to modulate the activity or expression of
                                                                                                                                                                Identifying a compound capable of diagnosing, preventing or treating or an HIV-related disorder comprises assaying the ability of the compto modulate e.g. 1414, 1481 or 1553 nucleic acid expression or polypeptide activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            13-FEB-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homo

These proteins and nucleic acids encoding them (ADE40422-ADE40473) are differentially expressed in tissues relating to AIDS or an HIV-related disorder compared to their expression in normal tissues. The invention also relates to the use of the compounds identified to modulate viral replication in a cell and to treat a patient with AIDS or an HIV-related disorder. The invention further discloses methods for the diagnostic evaluation and prognosis of various HIV-related disorders, and for the identification of individuals exhibiting a predisposition to such conditions. The modulatory compounds identified using the method of the invention may be small organic molecules, peptides, antibodies or antisense nucleic acid molecules. The methods of the invention are useful in diagnosing, preventing or treating AIDS or HIV-related disorders. The present sequence represents a human protein which is differentially expressed in AIDS or HIV-related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; use of such antibodies for drug targeting
                                                                                                                                                                                                                                                                                                           Determining the presence or absence of a pathological useful for diagnosing, prognosing or treating cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            detection; diagnosis; prognosis; drug screening; drug targeting; wound healing; contraception; cytostatic; cardiant; immunomodulatory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammatory disease; autoimmune disease; retinal neovascularistaion syndrome; scarring; uterine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and methods of screening for modulators of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, antibodies and methods are useful for disgnosing, prognosing and treatin cancer and other conditions such as psoriasis, ischaemia, heart disease, atherosolerosis, inflammatory diseases, authormanune diseases, retinal neovascularistaion syndromes, scarring and uterine fibroids. They may also be useful in wound healing and in contraception. The present sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

CC The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
CC whose expression is upregulated or downregulated in specific cancers or
CC other diseases such as angiogenic or fibrotic disorders, and to methods
CC of determining the presence or absence of a pathological cell in a
CC patient by detecting a nucleic acid at least 80% identical to those of
CC the invention or by detecting a polypeptide of the invention. The
CC invention also relates to expression vectors and host cells comprising a
CC polypeptide of the invention; antibodies which specifically bind a
CC polypeptide of the invention; use of such antibodies for drug targeting;
CC and methods of screening for modulators of activity or expression of the
CC polypeptides and mucleic acids. The nucleic acids, polypeptides,
CC antibodies and methods are useful for diagnosing, prognosing and treating
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC antibodies inflammatory diseases, autoimmune diseases, retinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-JAN-2002;

                                                                                                                                                                                                                                                                                                    The invention describes a method of identifying a candidate branching morphogenesis modulating (MBM) agent. The method comprises: providing an assay system comprising a MBM polypeptide or nucleic acid; contacting the assay system with a test agent under conditions where the system provides a reference activity, except for the presence of the test agent; and detecting a test agent-biased activity of the assay system, where a difference between the test agent-biased activity and the reference activity identifies the test agent as a candidate branching morphogenesis modulating agent. Also described are: a method of modulating branching morphogenesis in a mammalian cell; and a method for diagnosing a disease in a patient. The method is useful in identifying a candidate branching morphogenesis modulating agent for preparing a composition for diagnosing or treating cancer. This is the amino acid sequence of a human branching
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a candidate branching morphogenesis modulating agent for treating cancer comprises contacting the assay system comprising a MBM polypeptide or nucleic acid with a test agent and detecting a test agent-biased activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Schulte-Merker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for detecting a lung cancer-associated CC transcript in a cell from a patient, comprising contacting a biological CC sample from the patient with a polynucleotide that selectively hybridises CC increased or decreased expression in lung cancer samples. Lung cancer CC associated polynucleotides and polypeptides are used for identifying a CC compound that modulates a lung cancer-associated polypeptide, for CC compound that modulates a lung cancer-associated polypeptide, for CC compound that modulates a lung cancer-associated cell to treat lung cancer in a patient and for treating a mammal having lung cancer by CC cancer in a patient and for treating a mammal having lung cancer, non-small cell concer in a patient and for treating a mammal having lung cancer, non-small cell contracting lung cancer, such as small cell lung cancer, non-small cell contracting concer or other benign or precancerous lesions, e.g. atelectasis, CC emphysema, bronchitis, chronic obstructive pulmonary disease, fibrosis, hypersensitivity pneumonitis, interstitial pulmonary fibrosis, asthma and bronchiectasis. The genes, polymucleotides and polypeptides are useful for diagnostic purposes and as targets for screening for therapeutic CC compounds that modulate lung cancer, such as antibodies. Sequences CC NBU56408-ABU56745 represent lung cancer-associated polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                        CC The invention relates to nucleic acids and proteins (ADN38683-ADN40064)
CC whose expression is upregulated or downregulated in specific cancers or
CC other diseases such as angiogenic or fibrotic disorders, and to methods
CC of determining the presence or absence of a pathological cell in a
CC patient by detecting a nucleic acid at least 80% identical to those of
CC the invention or by detecting a polypeptide of the invention. The
CC invention also relates to expression vectors and host cells comprising a
CC nucleic acid of the invention; antibodies which specifically bind a
CC polypeptide of the invention; use of such antibodies for drug targeting;
CC and methods of screening for modulators of activity or expression of the
CC polypeptides and methods are useful for diagnosing, prognosing and treating
CC antibodies and methods are useful for diagnosing, prognosing and treating
CC cancer and other conditions such as psoriasis, ischaemia, heart disease,
CC atherosclerosis, inflammatory diseases, autoimmune diseases, retinal
CC neovascularistation syndromes, scarring and uterine fibroids. They may
CC also be useful in wound healing and in contraception. The present
CC sequence represents a polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Determining the presence or absence of a pathological cell in a useful for diagnosing, prognosing or treating cancer, comprises a nucleic acid in a biological sample.

They can be expressed in e;g. dpi2.CHO host cells using DNA constructs (AATS1456.58) that include the gd.trk gene fusions. gD.trkA, B and C are used in kinase receptor activation, enzyme-linked immunosorbent assays (KIRA ELISA) to measure autophosphorylation of rPTK kinase domains. These assays are used to identify and characterise potential (ant)agonists of rPTKs, study ligand-receptor interactions, measure phosphatase activity and identify rPTK ligands in clinical samples.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neurodevelopmental disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Dorsey
```

The present invention relates to a method of treating neurodegenerative or neurodevelopmental disorders in a mammal which involves administering an isolated nucleic acid encoding a full-length TrkB or TrkC or their mutant, variant, homologue or fragment or an anti-sense RNA for truncated TrkB or TrkC isoforms, where they increase the amount of full-length TrkB or TrkC or decrease the amount of truncated TrkB or TrkC in treated neurons. The methods and compositions of the invention are useful for treating or preventing neurodegenerative or neurodevelopmental disorders such as Alzheimer's disease (AD), Parkinson's disease (PD), Huntington's disease (HD), amyotrophic lateral sclerosis (ALS; Lou Gehrig's disease), sidabetic peripheral neuropathy, the adverse complications of Down's syndrome (DS) and other types of peripheral neuropathy. Sequences of the invention are also used in gene therapy. The present sequence is mouse full-length TrkB (TrkB.FL) protein Sequence 821 ΑA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ę,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dorsey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        န္
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TrkB and/or
```

The invention relates to treating a neurodegenerative or neuroCC developmental disorder in a mammal. The method involves altering the
CC ratio of the amount of full length TrkB polypeptide to the amount of
CC truncated TrkB polypeptides in a neuron or by altering the ratio of the
CC mount of full length TrkC polypeptide to the amount of truncated TrkC
CC polypeptides in a neuron. The methods and compositions of the present
CC polypeptides in a neuron. The methods and compositions of the present
CC or neuro-developmental disorder, such as Alzheimer's disease, Parkinson's
CC disease, Huntington's disease, amyotrophic lateral sclerosis (Lou
CC dehrig's disease), the adverse neurologic complications of Down syndrome,
CC diabetic peripheral neuropathy and other types of peripheral neuropathy,
CC and is associated with an injury to the central or peripheral and/or
CC system resulting from stroke, cerebral ischaemia, or chemical and/or
CC physical trauma. The present sequence represents a mouse TrkB polypeptide
CC (GenBank Accession No. X17647)

Sequence 821 AA;

                                                                                                                                                                                                                                                                          the nervous tissue. In the CNS, expressed, mainly in the nervous tissue. In the CNS, expression is observed in the cerebral cortex, hippocampus, thalamus, choroid plexus, granular layer of the cerebellum, brain stem, and spinal cord. In the peripheral nervous system, it is expressed in many cranial ganglia, the ophtalmic nerve, the vestibular system, multiple facial structures, the submaxillary glands, and dorsal root ganglia. Isoform TrkB-T1 is expressed in multiple tissues, mainly in brain, pancreas, kidney and heart. Isoform TrkB-T-Shc is predominantly expressed in brain.

substrates for the TRK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Name=TrkB-T1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (NGF). Involved in the development and/or maintenance of the nervous system. This is a tyrosine-protein kinase receptor. Know substrates for the TRK receptors are SHC1, PI-3 kinase, and PLC-gamma-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IsoId=Q16620-3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           IsoId=Q16620-1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Comment=Additional isoforms seem to

"The neurotrophic factors brain-derived tyrosine phosphate.

SUBUNIT: Exists in a dynamic equilibrium between affinity) and dimeric (high affinity) structures.

SUBCELLULAR LOCATION: Type I membrane protein.

ALTERNATIVE PRODUCTS:

Event-Alternative splicing; Named isoforms=4;

Comment-Additional isoforms seem to exist;

Name-GP145-TRKB; Synonyms=L3; 1 05:893-903(1931).

1 05:893-903(1931).

FUNCTION: Receptor for brain-derived neurotrophic factor (BDN reurotrophin-3 and neurotrophin-4/5 but not nerve growth fact (NGF). Involved in the development and/or maintenance of the nervous system. This is a tyrosine-protein kinase receptor. Full substrates for the TRK receptors are SHC1, PI-3 kinase, and is expressed in various cell types.
PTM: Ligand-mediated auto-phosphorylation.
SIMILARITY: Belongs to the Tyr protein kin receptor subfamily.
SIMILARITY: Contains
SIMILARITY: Contains IsoId=P15209-4; Sequence=VSP_002905, VSP_002906; TISSUE SPECIFICITY: The different forms are differentially gamma-1.
CATALYTIC ACTIVITY: ATP + a protein tyrosine = Name=L10 Name=GP95-TRKB; Synonyms=T1; 65:895-903 (1991). IsoId=P15209-2; IsoId=P15209-3; IsoId=P15209-1; Sequence=Displayed; Gariboldi M., Sequence=VSP_002907 Sequence=VSP_002908, NN immunoglobulin-like C2-type leucine-rich (LRR) repeats. for the (ISOFORMS Hirokawa N., Jackson I.J trkB tyrosine E based on neurotrophic factor and tyrosine kinase recepto AND VSP_002909, kinase functional annotation C2-type .272.20.13019; .M.; family. Insulin motifs Gough ADP domains. + Jarvie receptor."; o f protein ang L., tsu N., , Sato K., and PLCfactor (BDNF) ≅.D., . . e E

"Identification of TrkB autophosphorylation sites and evidence the phospholipase C-gamma 1 is a substrate of the TrkB receptor.";

J. Biol. Chem. 269:5458-5466 (1994).

-I- FUNCTION: Receptor for brain-derived neurotrophic factor (BDN neurotrophin-3 and neurotrophin-4/5 but not nerve growth fact (NGF). Involved in the development and/or maintenance of the nervous system. This is a tyrosine-protein kinase receptor. K substrates for the TRK receptors are SHC1, PI-3 kinase, and p gamma-1.

-I- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein tyrosine - ADP-protein.
                                                                           This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                    IROId=063604-3; Sequence=VSP_002912, VSP_002913;
TISSUE SPECIFICITY: The different forms are differentially
expressed in various cell types. The T2 isoform is primarily
expressed in neurons.
PTM: Ligand-mediated auto-phosphorylation.
SIMILARITY: Belongs to the Tyr protein kinase family. Insulir
receptor subfamily.
SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 2 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tyrosine phosphate.
SUBUNIT: Exists in a dynamic equilibrium between affinity) and dimeric (high affinity) structures SUBCELIULAR LOCATION: Type I membrane protein.
